

Assignment 02

Principle of Management

University of Management and Technology Lahore

Participant's NAME: SARIM ULLAH

Participant ID: F2022031008

Section: A

Resource Person

[Dr. Mohammad Pervez Mughal](#)

Department of Industrial engineering

School of Engineering

Conduct research and identify a new or emerging management theory. Do you think the new theory will have an impact on future management practices?

Modern management concept is not a single concept. By its very nature, management is a complicated procedure and the multidisciplinary field of learning. Modern management is the synthesis of the classical, behavioral, numerical and contemporary management movements. One of these keys to successful governance is the ability to see and implement contemporary management rules and techniques effectively. Studying basic concepts offers the foundation that powerful managers of the future need in terms of understanding techniques, organizational cultures and possibilities. Knowing and willingness of organization to combine a variety of management theories and instruments as the structure always shifts are keys to gaining and sustaining competitive advantage over others.

Can scientific management principles help you be more efficient? Choose a task you do regularly (such as laundry, fixing dinner, grocery shopping, studying for exams, etc.). Analyze it by writing down the steps involved in completing the task. See if any activities could be combined or eliminated. Find the “one best way” to do this task. And the next time you have to do the task, try the scientifically managed way! See if you become more efficient (keeping in mind that changing habits isn’t easy to do).

Tracking experience is the best means to master experience management. Calculate how long it can get you to accomplish the job. So observe the time you spend on the task and compare it to the estimated period. Monitoring the experience will help you be more aware of the flow within the day. And with the good time management method, you can make time for each job and make the history of all the time you spent on the project. You might even find a way that helps you make and see stories of the experience from work.

How do business organizations survive for 100+ years? Obviously, they have seen a lot of historical events come and go. Choose one of these companies and research its history: Coca-Cola, Procter & Gamble, Avon, or General Electric. How has it changed over the years? From your research on this company, what did you learn that

could help you be a better manager?

Since the early 2000s, these criticisms at the usage of Coca-Cola products, too as the organization itself, intensified with fears around health outcomes, environmental issues, animal experimentation, economic business practices and employee issues. The Coca-Cola Company has been confronted with multiple cases relating these different criticisms. The trademark, bottle decoration, and brand image are internationally recognizable. Their result is ranked the first beverage, repeatedly, internationally, and gets notoriety as the first beverage eaten by astronauts in place. Coca-Cola utilizes the different variety of integrated marketing communications to promote through direct selling, network based media, social media, task and sales.

Pick one historical event from this century and do some research on it. Write a paper describing the impact this event might be having or has had on how workplaces are managed.

Real thought requires the ability to recognize, analyze, and assess multiple perspectives on a given historical event in order to make conclusions about the event. It also requires the ability to identify, analyze, and assess multiple past developments within one country, one or more developments across or between various societies, and at different chronological and geographical contexts. The HISTORY of COLONIAL NORTH AMERICA center's mainly on the battle of England, France, and Spain to increase power of this Europe. Colonists crossed the ocean for several reasons, and their governments had several approaches to their colonizing campaigns. These differences made both advantages and disadvantages that deeply impacted the New world's circumstances, France and Spain, for example, were ruled by autocratic sovereigns whose law was pure; their settlers went to earth as servants of the top and sales promotion.

Come on, admit it: You multitask, don't you? And if not, you probably know people who do. Multitasking is also common in the workplace. But does it make employees more efficient and effective? Pretend you are the manager in charge of a loan-processing department. Describe how you would research this issue using each of the following management approaches or theories: scientific management, general administrative theory, quantitative approach, behavioral approach, systems theory, and contingency theory.

We know, you won't join the organization if you don't like the work, but this is not this end. The fact is, do some research and collect information about the organization before you go for the interview to assist you with ensuring the interviewer that situation is the kind of environment you are looking for. For instance, if you know the company in dispute has a strict business situation, then you might answer by saying that you like working in highly organised or managed environments. Instead, if the company gives independence to its employees, you would answer with the agreeing consent to this view.
